

# PADS 4

DIGITAL SIGNAGE SOFTWARE

**PADS4 is the successor of the award-winning PADS Professional software by Net Display Systems (NDS). With PADS4 providing your audience with the right targeted information at the right moment is plain and simple.**

PADS4 contains a user friendly Designer for creating appealing presentations and an intuitive Scheduler. Furthermore, PADS4 comes with a Viewer and Server application. All applications have a Microsoft® Office look and feel, ensuring you will have the PADS software up and running in no-time.

You can effortlessly integrate real-time data of external data sources like MS Exchange, MS Dynamics, SAP, CMS systems, room reservation systems, queue management, social media, etc.

(Re)-using and displaying content from existing databases such as CMS information are key features of PADS4. It's a high-end digital signage solution that doesn't require recreating existing content. The integration of PADS4 results in saving time and budget costs by adapting the existing workflow of the end user.

Another standout feature of PADS4 is the possibility to combine different Viewer types within one package. You don't need to purchase multiple signage solutions if your requirements vary from simple to complex content.

Furthermore, PADS4 gives you the opportunity to easily adapt interactivity in a signage system. This interactivity can be based on several external triggers, such as touch screens, RFID, Barcode, QR Code, face recognition, etc.

When choosing PADS4 as your digital signage solution your existing digital security policy won't be influenced as it runs under any virus scanner available.

With PADS4 by NDS you are well prepared for the future in Digital Signage. It enables you to deploy professional and profitable installations whether they are small or large.

#### **PADS4 Product highlights:**

- Microsoft® Office look and feel
- Easy integration of real-time data without programming
- Content Designer included
- Reliable and stable performance in mission critical environments
- Ready to use in Software as a Service networks (SaaS)
- Simple license structure
